

Flowing Well

## Vote No On HB 707

1. This bill installs two unqualified persons on the Board of Water Well Contractors. This board provides well construction standards and enforcement that require technical knowledge well beyond pump installation.
2. Page 6—Lines 28, 29, 30 This reads like a pump installer can supervise well construction.
3. Agriculture must get a permit to repair pumps that require immediate attention.
4. Enforcement would cost a huge sum or in actuality be impossible.
5. This bill would require double licensing of many already licensed and bonded professions that provide pump installation:
  - a. Well drillers
  - b. Plumbers
  - c. Electricians
  - d. Engineers
  - e. Waste water operators
6. If a separate license is needed for the small number of pump installers that are not already licensed, it should be in conjunction with the Water Well Licensing Board and professionals in the water well industry.
